INVESTMENT STRATEGIES & RISK MITIGATION FACTORS

Investment Strategies

1. Mahindra Manulife Liquid Fund
   To achieve the investment objective of the Scheme, the Fund shall be managed to generate reasonable returns commensurate with low risk. The Scheme is positioned at the lowest level of risk-return matrix, which will be the guiding line to make suitable investments with low risk. The Scheme will invest predominantly in money market securities with some allocation towards other debt securities to enhance the portfolio return. The portfolio, for managing the liquidity risk, will be structured with the matrix of asset liability management where the maturity of the assets will seek to align with historical observed trends of liabilities. The Scheme will seek to generate reasonable return along with maintaining liquidity with the help of cash and cash equivalent instruments.

2. Mahindra Manulife ELSS Kar Bachat Yojana
   The fund manager will follow an active management style. The Scheme will focus on creating an appropriate diversified portfolio of companies with a long-term perspective. The Scheme will follow a top-down approach to select sectors and follow a bottom-up approach to pick stocks across the sectors based on the growth and value opportunities available across sectors and stocks.

3. Mahindra Manulife Low Duration Fund
   In terms of the risk-return profile of the Scheme, the Scheme is positioned above the liquid fund but lower than the short-term fund. Hence the portfolio strategy will seek to generate returns by having a marginally higher maturity and moderately higher credit risk. The Scheme shall however maintain balance between safety and liquidity.

4. Mahindra Manulife Equity Savings Dhan Sanchay Yojana
   The fund manager will follow an active management style. The Scheme will focus on creating an appropriate diversified portfolio of companies with a long-term perspective. The Scheme will follow a top-down approach to select sectors and follow a bottom-up approach to pick stocks across the sectors based on the growth and value opportunities available across sectors and stocks.

Key Assumptions
1. Macaulay Duration measures interest rate risk accurately only for instruments where cash flows do not change with changes in the yield (i.e. for plain vanilla instruments and not for instruments with embedded options).
2. Macaulay Duration assumes yield curve is flat and so cash flows are reinvested at constant YTM rate over the instrument’s period.
3. Macaulay Duration does not consider the fact that duration does not remain constant and duration changes with level of YTM rates.

Example Calculation
Assume a bond paying 10% coupon, matures in three years. Yield to maturity is at 10%. The bond pays coupon annually, and pays the principal on the final payment. Given this, the following cash flows are expected over the next three years:

<table>
<thead>
<tr>
<th>Period</th>
<th>Cash flow</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
<td>Rs.100</td>
</tr>
<tr>
<td>Year 2</td>
<td>Rs.100</td>
</tr>
<tr>
<td>Year 3</td>
<td>Rs.1100</td>
</tr>
</tbody>
</table>

With the periods and the cash flows known, a discount factor must be calculated for each period. This is calculated as \(\frac{1}{(1 + r)^n}\), where \(r\) is the interest rate and \(n\) is the number of periods in question. Thus the discount factors would be:

<table>
<thead>
<tr>
<th>Period</th>
<th>Discount Factor Formula</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
<td>(\frac{1}{(1 + 0.10)^1})</td>
<td>0.909</td>
</tr>
<tr>
<td>Year 2</td>
<td>(\frac{1}{(1 + 0.10)^2})</td>
<td>0.826</td>
</tr>
<tr>
<td>Year 3</td>
<td>(\frac{1}{(1 + 0.10)^3})</td>
<td>0.751</td>
</tr>
</tbody>
</table>

Next, multiply the period’s cash flow by the period number and by its corresponding discount factor to find the present value of the cash flow:

<table>
<thead>
<tr>
<th>Period</th>
<th>Weighted Present Value of Cash flow</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
<td>(1 \times Rs.100 \times 0.909)</td>
<td>90.9</td>
</tr>
<tr>
<td>Year 2</td>
<td>(2 \times Rs.100 \times 0.826)</td>
<td>165.3</td>
</tr>
<tr>
<td>Year 3</td>
<td>(3 \times Rs.1100 \times 0.751)</td>
<td>2479.3</td>
</tr>
</tbody>
</table>

Sum \(= 2735.5\) (numerator)

\[\text{Macaulay duration} = \frac{\text{Sum of PV Cash Flows} \times \text{Period}}{\text{Sum of Discount Factors} \times \text{Period}} = \frac{2735.5 \times 3}{2735.5} = 3.74\]

Please refer SIR for detailed investment strategy.

5. Mahindra Manulife Fixed Income Strategy
   The fund manager will seek to play out the anticipated movement in the interest rate by changing the maturity of the underlying portfolio, and also anticipated change in the term structure (flattening /steepening) of the yield curve in the portfolio construction after analysing the macro-economic environment including future course of system liquidity, interest rates and inflation along with other considerations in the economy and markets.

Concept of Macaulay Duration
Macaulay duration measures the average time that would be taken to receive the cash flows from the invested instrument. It is the weighted average term to maturity of the cash flows from an instrument. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Macaulay duration is a measure of interest rate sensitivity of a fixed income instrument. Higher the Macaulay duration, higher would be the interest rate risk. Macaulay duration of a portfolio is the asset weighted average of the Macaulay duration of individual bonds / securities in the portfolio. The table below illustrates the calculation of portfolio Macaulay duration.

spread analysis and also an analysis of the credit of the issuer. The fund manager will seek to generate alpha by investing in papers giving superior returns after in-depth analysis of micro and macro factors.

The investment team of the AMC will, as a mitigation and risk control procedure, carry out rigorous credit evaluation of the issuer company proposed to be invested in. The credit evaluation will analyse the operating environment of the issuer, the sector analysis, business model, management, governance practices, quality of the financials, the past track record as well as the future prospects of the issuer and the financial health of the issuer.

8. Mahindra Manulife Dynamic Bond Yojana
The Scheme seeks to generate returns for its investors through an active management of its portfolio of debt and money market instruments. The active management would involve changing the duration of the portfolio, changing the allocation between corporate debt securities and gilt's and positioning for exploiting any anomalies in the term structure of the yield curve.

The Fund Manager will initiate and manage the portfolio after analyzing the macro-economic environment including future course of system liquidity, interest rates and inflation along with other considerations in the economy and markets. The Fund Manager will also seek to play the movement in the credit spreads and also look at the term structure of the credit curve while deciding on the portfolio allocation. The Fund Manager may also initiate tactical allocation in the portfolio according to the prevalent market conditions in order to generate alpha in the Scheme.

The investment team of the AMC will, as a mitigation and risk control procedure, carry out rigorous credit evaluation of the issuer company proposed to be invested in. The credit evaluation will analyse the operating environment of the issuer, the sector analysis, business model, management, governance practices, quality of the financials, the past track record as well as the future prospects of the issuer and the financial health of the issuer.

The investment team follows Risk Guard process – an internal research and process framework that would focus the quality of business, financial and management, for security selection and monitoring. Also as a part of the risk mitigation framework, the investment team would keep adequate liquidity buffers in form of liquid securities to manage any drawdowns.

9. Mahindra Manulife Large Cap Pragati Yojana
The fund manager will follow an active management style. The Scheme will focus on creating an appropriate diversified portfolio of companies with a long term perspective. The Scheme will follow a bottom up approach to pick stocks across the sectors. Stock picking will be based on the industry, macro and long term potential of the business. The focus will be to build an appropriate portfolio to capture the growth opportunities in India and identify companies which can grow to become the next leaders in the sector.

The Scheme by utilizing a holistic risk management strategy will endeavour to manage risks associated with investing in equity markets. The Scheme has identified the following risks and designed risk management strategies, which are embedded in the investment process to manage these risks:
   a. Quality risk – Risk of investing in unsustainable/weak companies
   b. Price risk – Risk of overpaying for a company
   c. Liquidity risk - High impact cost of entry and exit
   d. Volatility risk – Volatility in price due to company or portfolio specific factors
   e. Event risk - Price risk due to a company/sector specific or market event

Please refer SID for detailed investment strategy.

10. Mahindra Manulife Top 250 Nivesh Yojana
The aim of the Scheme is to seek growth and deliver above benchmark returns by providing long-term capital growth from an actively managed portfolio, comprising primarily large cap and mid cap stocks. The Scheme aims to be predominantly invested in equity and equity related securities.

The Scheme will endeavour to achieve this by maintaining a minimum of 80% allocation to equity and equity related securities out of which allocation of at least 35% each will be towards large cap and mid cap stocks. Depending on the market conditions and outlook, the Scheme will adopt growth or value approach while investing. Investment could also be made towards fixed income securities including money market instruments.

A top down and bottom up approach will be used to invest in equity and equity related instruments. Investments will be based on the Investment Team's analysis of business cycles, regulatory reforms, competitive advantage etc. The fund manager in selecting stocks will focus on the fundamentals of the business including profitability, the industry structure, the quality of management, sensitivity to economic factors, the financial strength of the company, valuation and the key earnings drivers. The Scheme will maintain a diversified portfolio spread across various industries / sectors in order to mitigate the concentration risk.

As per the asset allocation pattern indicated above, for investment in debt securities and money market instruments, the Scheme may invest a part of its portfolio in various debt securities issued by corporates and / or state and central government. Such government securities may include securities which are supported by the ability to borrow from the treasury or supported only by the sovereign guarantee or of the state government or supported by GOI / state government in some other way.

With the aim of controlling risks, rigorous in depth credit evaluation of the instruments proposed to be invested in will be carried out by the Investment Team of the AMC. The credit evaluation includes a study of the operating environment of the company, its past track record as well as the future prospects of the market. The active management team is of the view that the changes in the financials and the health of the issuer.

The Scheme may invest in other Scheme(s) managed by the AMC or in the schemes of any other mutual fund, provided it is in conformity with the investment objectives of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments.

Please refer SID for detailed investment strategy.

Concept of Macaulay Duration

Macaulay duration measures the average time that would be taken to receive the cash flows from the invested instrument. It is the weighted average term to maturity of the cash flows from an instrument. The weight of each cash flow is determined by dividing the present value of that cash flow by the price. 15. Mahindra Manulife Short Term Fund

The Scheme seeks to invest in a diversified portfolio of debt and money market instruments to generate stable income and capital appreciation with relatively lower credit and interest rate risk. The Scheme will maintain the Macaulay duration of the portfolio between 1 year to 3 years.

The Fund Manager will seek to play out the yield curve and exploit anomalies if any in the curve, for the portfolio construction after analysing the macro-economic environment including future course of system liquidity, interest rates and inflation along with other considerations in the economy and markets. 16. Mahindra Manulife Arbitrage Yojana

The primary objective of the Scheme is to invest in arbitrage opportunities between spot and futures prices of exchange traded equities and the arbitrage opportunities available within the derivative segment. If suitable arbitrage opportunities are not available in the opinion of the Fund Manager, the Scheme may invest in short term debt and money market securities.

The Fund Manager will evaluate the difference between the price of a stock in the futures market and in the spot market. If the price of a stock in the futures market is higher than that in the spot market, after adjusting for costs and taxes the scheme shall buy the stock in the spot market and sell the same stock in equal quantity in the futures market, simultaneously.

The Scheme will endeavor to build similar market neutral positions that offer an arbitrage potential for e.g. buying the basket of index constituents in the cash or futures segment and selling the index futures, etc. The Scheme would also look to avail of opportunities between one futures contract and another.

As arbitrage opportunities are dependent on ensuing market conditions, there will be a part of the portfolio, which will be invested in debt securities and money market securities. This component of the portfolio will provide the necessary liquidity to meet redemption needs and other liquidity requirements of the Scheme. The derivative and arbitrage strategies the Scheme may adopt could be as under.

**Derivative & Arbitrage Strategies:** Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument, index, such as: interest rates, exchange rates and equities.

The Scheme will invest in arbitrage opportunities between spot and futures prices of exchange traded equities. The Scheme may build similar hedge positions that offer an arbitrage potential for e.g. buying the basket of index constituents in the cash or futures segment and selling the index futures, and selling the corresponding stock future, etc.

The Scheme will also invest in low risk derivatives strategies. These strategies will involve any combination of cash, futures and options.

The Scheme will invest in opportunities arising out of corporate actions announced in stocks that offer superior risk adjusted returns and IPOs.

1. **Cash Future Arbitrage:** This strategy is employed when the price of the future is trading at a premium to the price of its underlying in spot market. The Scheme shall buy the stock in spot market and endeavor to simultaneously sell the future at a premium on a quantity neutral basis.

Buying the stock in spot market and selling the futures results into a hedge where the Scheme has locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts. The future contracts are settled based on the last half an hour’s weighted average trade of the spot market. Thus there is a convergence between the spot price and the futures market on expiry. This convergence helps the Scheme to generate the arbitrage return locked in earlier.

On or before the date of expiry, if the price differential between the spot and futures market on expiry. This convergence helps the Scheme to generate the arbitrage return locked in earlier.

Rolling over of the futures transaction means unwinding the short position in the futures of the current month and simultaneously shorting futures of the subsequent month maturity, and holding onto the spot position.

**Illustrations**

Buy 100 shares of Company A at Rs 100 and sell the same quantity of stock’s future of the Company A at Rs 101.

stock price is below Rs 1000, the Scheme will not exercise the option while it loses the premium
The index futures normally trade at a discount to the theoretical index due to large volumes of stock hedging being done using the Nifty Index futures giving rise to arbitrage opportunities.
One instance in which an index arbitrage opportunity exists is when index future is trading at a discount to the index (spot) and the futures of the constituent stocks are trading at a cumulative premium.
The Fund Manager shall endeavour to capture such arbitrage opportunities by taking long positions in the Nifty Index futures and short positions in the synthetic index (constituent stock futures).
Based on the opportunity, the reverse position can also be initiated
Index Arbitrage (Spot market): This strategy is very similar to the index arbitrage strategy explained above. This strategy can be executed when the index future is trading at a premium to the underlying index. The Fund Manager will buy the index constituents (ratio of weights in the index) in the spot market and simultaneously sell the index future at a premium. On expiry day, the futures expire at cash. This convergence helps realize the profits locked-in.
3. Portfolio Protection/ Hedging: The Scheme may use exchange-traded derivatives to hedge the equity portfolio.
Illustrations of hedging using options— Call Option (Buy): The Scheme buys a call option at the strike price of say Rs.1000 and pays a premium of say Rs. 50. The Scheme would earn profits if the market price of the stock at the time of expiry of the option is more than 1050 being the total of the strike price and the premium thereon. If on the date of expiry of the option the stock price is below Rs 1000, the Scheme will not exercise the option while it loses the premium of Rs. 50.
Put Option (Buy): The Scheme buys a Put Option at Rs 1000 by paying a premium of say Rs 50. If the stock price goes down to Rs. 900, the Scheme would protect its downside and would only have to bear the premium of Rs 50 instead of a loss of Rs 100 whereas if the stock price moves up to say Rs. 1100 the Scheme may let the Option expire and forego the premium thereby capturing Rs. 1000 upside after bearing the premium of Rs. 50. The Scheme may use both index and stock futures and options to hedge the stocks in the portfolio.
Other Arbitrage Derivative Strategies: The Scheme will also invest in arbitrage opportunities arising out of corporate actions (e.g. – mergers, FPO, delisting, open offers, etc). These are just a few examples of arbitrage opportunities arising out of corporate actions. This is not an exhaustive list as every corporate action could offer a different and unique opportunity.
The Scheme may also use derivative instruments as may be introduced from time to time, with the underlying being any of the stocks in a recognized stock exchange.
The Scheme may deploy one or more of the above mentioned derivative Strategies to the extend they are in line with the investment objective of the Scheme.

Special Situations (Corporate Actions)
The Scheme may take advantage of situations that present an investment opportunity to Fund Manager who can judge the implications of that opportunity that can unlock value for investors.
Some of these situations are Merger of businesses or companies which may result in synergies in business activities. Demerger may result in separation / spin-off of business operation / activity from some other business operation / activity, Companies may consider a buy-back of their shares from the market due to various reasons (like company has substantial free reserves, management is confident of the future growth potential, meeting with the regulatory norms, etc.) and unlock significant value for shareholders. Companies may consider delisting their companies from the respective stock exchange. It may be at the request of the promoters, acquisitions; BIFR under SICA etc., Company may offer its existing shareholders a right to purchase additional shares at a discount to the prevailing market price. A company may want to infuse capital for future projects, raise its holding as it expects good prospects going forward. A carefully analyzed rights issue can unlock value for shareholders; Open Offer is an event that increases the shareholding of the acquirer. An open offer can be voluntary or involuntary. An open offer is an indication that parties are interested in increasing their stake in the company. This can be positive for the company over the long run and gives the investor a signal for good times ahead, Debt restructuring i.e. a company may want to change its capital structure by means of reducing debt. Higher debt can lead to lower profits and cash flows. An attempt by the company to reduce debt or swap the same with other lower costs options can unlock value for shareholders.
There could by many other events that may result in share price appreciation. Such situations may include: turnarounds, companies underperforming, earnings, share buy-backs, and companies affected by regulatory changes and primary market listings. The Scheme will carefully analyze any such instance and participate in the same as such; corporate action often unlocks a lot of value for the investors.

17. Mahindra Manulife Flexi Cap Voyana
The Fund Manager will follow an active management style. The Scheme will focus on creating an appropriate diversified portfolio of companies with a long term perspective. The Scheme will follow a top down approach to select sectors and follow a bottom up approach to pick stocks across the sectors based on the quality of business model and quality of management. Quality of business model and quality of management will be assessed by evaluating past track record and/or future outlook. The selection of companies will be guided by a combination of one or more factors like:
a) profitable growth in good or bad cycles; b) Optimum utilization of capital and/or capacity; c) leadership shown in the industry in which they operate; and d) expectations of a turnaround in business momentum and e) track record of consistent & long term execution potential.
The Scheme by utilizing a holistic risk management strategy will endeavour to manage risks associated with investing in equity markets. The Scheme has identified the following risks and designed risk management strategies, which are embedded in the investment process to manage these risks:
a. Quality risk – Risk of investing in unsustainable/wake companies
b. Price risk - Risk of overpaying for a company
c. Liquidity risk- High impact cost of entry and exit
d. Volatility risk – Volatility in price due to company or portfolio specific factors
e. Event risk - Price risk due to a company/sector specific or market event

18. MAHINDRA MANULIFE ASIA PACIFIC RETS FOF
The investment objective of the Scheme is to provide long term capital appreciation by investing predominantly in units of Manulife Global Fund – Asia Pacific RETF Fund, an overseas fund primarily investing in real estate investment trusts (REITs) in the Asia Pacific ex-Japan region. The Scheme may also invest a certain proportion of its corpus in debt and money market instruments and / or units of liquid mutual fund schemes, in order to meet liquidity requirements from time to time.
However, there can be no assurance that the investment objective of the Scheme will be achieved.
Mutual Fund schemes can be of two types viz. actively managed and passively managed. An actively managed scheme would try and beat the returns generated by a given market by employing sophisticated research tools, actively trading a portfolio etc. On the other hand, a passively managed scheme like this overseas fund of funds scheme would invest in the overseas mutual funds / unit trusts within the investment pattern allowing Indian investor to diversify his / her risk from a single country and single currency investment. The investment made in the underlying fund will be based on the subscriptions and redemptions received in the Scheme and within the overall limits specified by SEBI/RBI.
